Narrative:

This survey is a dependent resurvey of Columbia County Survey No. CS # 931 as performed by engineer H.W. Freed in May of 1949. It was the purpose of this survey to recover and confirm or establish the applicable PLSS corners and as many of the applicable property corner pipes established by H.W. Freed and mark the westerly and northerly lines of the metes and bounds tract owned by Weyerhaeuser Columbia Timberlands in the southeast and northeast quarters of Section 14, Township 5 North, Range 4 West, W.M., Columbia County, Oregon for timber harvest.

Control for the survey was established using Topcon Hiper-RTK GPS receivers and a series of closed loop field traverses using a Topcon GTS-220 (00°00'05") total station. This survey recovered, confirmed to the applicable records and accepted each of the corners depicted as "found corner as noted". In most instances original monuments were recovered, although in all cases there was some variance to reported courses and distances between monuments.

Using the calculation methods and evidence depicted on page 2, this survey recovered the South 1/4 corner, Southeast corner, East 1/4 corner and Northeast corner of Section 14-T5N-R4W. As depicted, this survey also found multiple 1 1/2" stainless steel pipes set at angle points in the surveyed line. Although not expressly stated on CS # 931, these pipes are held to have been set by H.W. Freed in 1949 owing primarily to the relative positional location of each pipe. It is clear that the legal description vesting the subject property was written either by H.W. Freed or, at minimum, using the data presented by him on CS # 931. As such, the found pipes were accepted as original monuments and the minor inconsistencies found between said pipes and the courses in the record description were disregarded. This survey found that only two of the Freed corners were missing (corners 2 and 13 on Page 2) and said corners were reset using the methods detailed in the descriptions for each position.

The surveyed property lines were flagged, blazed, painted and posted with 1/2" x 72" fiberglass rods. The typical accessory bearing tree established by this survey has a 40d spike in center side and an aluminum tag at head height facing the corner.
